Professional Experience

Meta

New York, NY

Senior Data Scientist, Facebook Creation

Feb 2024 - Present

- Lead 0-1 development of Close Friends in Facebook Stories through rigorous AI-assisted experimentation, reporting, and analytics, reducing time-to-ship down to 6 months from projected 18 months
- Guided product and experimentation strategy across Creation and Stories in Facebook and Messenger, driving +0.3% ecosystem sessions among 240M global producers and accelerating org-wide adoption of AI analytics tooling by 50% over a half
- Saved \$3M in engineering costs by conducting longitudinal and meta-analysis to persuade senior leadership to deprioritize incremental investments in Messenger Stories editing tools in favor of new sharing formats with greater engagement potential
- Influenced young adult strategy and drove +0.12% user sessions in the US & CA through experiment meta-analysis that prioritized the Stories reply and interaction experiences in Messenger

Data Scientist, Remote Presence

Aug 2020 - Feb 2024

- Conducted statistical analyses on correlational and causal relationships between real-time communication PREQ and user engagement, resulting in +14.5% y/y improvement in technical and user-perceived reliability and quality for 1B+ audio/video calling users globally across Messenger and Instagram
- Defined and implemented over a dozen novel metrics/frameworks to quantify issues and improvements such as impact of bandwidth allocation algorithms on network congestion
- Shaped product road map by designing a topic modeling data pipeline to extract insights into user pain points from hundreds of samples of unstructured survey data
- Mentored a team of 10 junior data scientists on technical and soft skills, such as data manipulation and written communication, and fostered a strong and trusting team culture

Data Science Intern, Marketplace Buy & Sell Groups

May 2019 - Aug 2019

- Quantified opportunity size and product-market fit of Stories feature in buy and sell Facebook Groups to inform product road map and project prioritization
- Explored complex datasets across Marketplace, Groups, and Stories to identify key user segments to design and build the product for
- Productionized data pipeline of natural language understanding models with predictions of buy/sell intent to uncover insight on organic usage in Facebook Stories

Education

University of Maryland

Aug 2016 - May 2020

B.S. Operations Management & Business Analytics, and Information Systems

College Park, MD

Honors College - University Honors citation; Dean's scholarship

Skills

Technical: SQL, Python, product analytics, metric development, A/B testing and experimental design, hypothesis testing, statistical and causal inference, regression, classification, clustering

Soft: Data storytelling and visualization, cross-functional alignment, project management, driving team culture
